

how the cryopen works

cryopen.

The CryoPen Cryosurgical System was designed to be an innovative solution for the problems of other cryosurgical products. In order to eliminate the need for cryogenic gases and liquids, the CryoPen Cryosurgical System employs a state-of-the-art linear compressor to cool the CryoPen Pen Cores. Using this technology, the CryoPen is able to reach temperatures of -100°C ~ -110°C .

Once the system is at the optimal temperature, the CryoPen is ready for accurate and predictable cryosurgery.
