## Cryosurgery at Your Fingertips

### WHAT IS CRYOPEN®

The CryoPen® system provides a means of freezing tissue without the use of cryogenic liquids or gases, such as liquid nitrogen, carbon dioxide, or nitrous oxide. The system consists of hand-held freeze modules, a refrigeration unit, and reusable tips. When used properly, the system will deliver effective temperatures for tissue ablation. The CryoPen® system is designed to ablate tissue by the application of extreme cold temperature.

The CryoPen® offers physicians and patients a safer, more convenient alternative to liquid nitrogen, carbon dioxide, and nitrous oxide systems.

### TREAT

- warts/plantar warts
- molluscum
- lentigo
- actinic keratoses
- dermatofibroma
- keloids
- seborrheic keratoses
- skin tags
- non-recurrent basal cell

### GREAT FOR YOUR PATIENTS & YOUR PRACTICE

**1(888)246-3928**

Consider the value of performing cryosurgery in your office; your patients know and trust you. For simple skin lesions, why ask them to stand in line at another practice, many times waiting weeks. Why not help them now! Cryopen® is always ready to go, no waiting; no dangerous or hazardous gases.

From the perspective of your practice, what can be better than helping your patients and simultaneously improving your reimbursement levels. As a general rule, you can use \$100 as typical reimbursement. Where else can you find a device and procedure that has the practice in a break-even situation treating just 60 patients?

**60 PATIENTS**

After that,  
CryoPen® is Free
